EXAMINER'S AMENDMENT

1. An examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the Issue Fee.

Authorization for the examiner's amendment was given in a telephone interview with Mr. Jeffrey Maynard, reg. no. 46208, on January 9, 2009.

2. In the claims: please amend the claims to the following:

Claims 1-5. (canceled)

Claim 6. (currently amended) A system for communicating with a motorist, comprising:
a repository of electronic addresses in which a vehicle is assigned an electronic address according to its license plate registration number, wherein the electronic address includes ~~at least one of a vehicle identification number or~~ the license plate registration number; and

a messaging service that enables a motorist associated with the vehicle to send and/or receive messages using the electronic address from said repository of electronic addresses via a wireless communication system.

Claim 7. (currently amended) The system of claim 6, wherein an algorithm coordinates a plurality of electronic addresses in the repository ~~for~~ for the motorist, at least one of the electronic addresses includes a license plate registration number.

Claim 8. (previously presented) The system of claim 6, wherein the motorist can simultaneously communicate over each of said plurality of electronic addresses.

Claim 9. (currently amended) A system for communicating with a motorist, comprising:
a repository in which a vehicle is assigned a telephone address according to its license plate registration number, wherein said telephone address includes ~~at least one of a vehicle identification number or~~ the license plate registration number; and
a telephone service system that enables a motorist associated with the vehicle to be directly contacted at the telephone address assigned from said repository.

Claim 10. (previously amended) The system of claim 9, wherein said telephone address comprises a cellular phone number.

Claim 11. (previously amended) The system of claim 6, wherein the electronic address is standardized for use with email, instant messaging, or telephone communication.

Claim 12. (currently amended) A computer-implemented method of providing communication to an electronic account, said method comprising:

establishing a repository that is accessible via an electronic device connected to a network;
populating said repository with license plate information;
creating an electronic account having an electronic address based on said license plate information, wherein the electronic address includes ~~at least one of a vehicle identification number or~~ a license plate registration number associated with a vehicle; and
enabling said electronic account as a destination address and/or originating address for a plurality of communication methods.

Claim 13. (currently presented) The computer-implemented method of claim 12, wherein said communication method comprises email.

Claim 14. (currently presented) The computer-implemented method of claim 12, wherein said communication method comprises instant messaging.

Claim 15. (canceled)

Claim 16. (currently presented) The computer-implemented method of claim 12, wherein said communication method comprises telephone communication.

Claim 17-21. (canceled)

Claim 22. (currently presented) The computer-implemented method of claim 12, wherein said license plate information comprises a registration number and state of issue.

3. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or suggest individually or in combination a computer-implemented method of directly deriving electronic address (such as email address, IM screen name, telephone number/address) from a motor vehicle's license plate information (note that vehicle identification number is not shown on a license plate therefore it is excluded from the making of an electronic address). The purpose is so that any third party may compose the electronic address by looking at the license plate and communicate with whoever registered the license plate and owns an account from a repository established for such purpose (see claim 12).

Claims 6 and 9 are system claims which comprise similar subject matter.

4. The prior art of record shows no direct utilization of license plate information for forming electronic address (such as email address, IM screen name, telephone number/address) for direct communication purposes. A great number of patents make use of the license plate information to find associated information such the vehicle owner's email address, telephone number, etc. that were entered into a database along with the license plate information. On the other hand, Obradovich et al. [US 20040209601] teaches forming email address using a vehicle identification number, and a Korean application [KR 2001064658] teaches dialing the vehicle number to access a telephone installed at the vehicle (even though a user may not know the telephone number). The instant application focuses on the license plate information, which, when correctly composed, may create a unique electronic address for communication on-the-spot.
